

S.No	Demo Section	Description	Duration (min s)	Responsible Member
1	Introduction	Introduce the project, objectives, and problem statement.	5 min	Bhuvan Tej
2	Dataset & Model Training	Explain dataset preprocessing, feature engineering, algorithms used (Logistic Regression, Decision Tree, Random Forest, XGBoost), and model selection.	7 min	Sathwik
3	Flask Web Application	Demonstrate the user interface, applicant data entry form, and model integration.	10 min	Manoj Kumar
4	Live Prediction	Show real-time credit card approval prediction using sample applicant data.	10 min	Bhuvan Tej
5	Results & Performance	Present model accuracy, evaluation metrics, confusion matrix, and comparison of algorithms.	15 min	Sathwik

6	Conclusi on & Future Scope	Summ arize the project, discuss benefits, limi tations, future enhancements, and answ er questions.	20 min	All M embers

Project Demo Planning

Date	2 July, 2026
Team ID	SWTID-2026-8797
Project Na me	Credit C ard Approv al Prediction
Maximum Marks	1 Mark

Project Demo Planning

A well -structured d emo p lan ensures th at the te am presents the Cr edit Card Approval Prediction project e ffecti vely by exp laining t he problem, demonstrating the machine le arning model, and showcasing the Flask web applicati on. Th e d emo highl ight s the workfl ow f rom applicant data input to real-time credit c ard approval prediction.

Demo Flow Summary

Step	Activity	Notes
1	Introduction & Problem Statement	Explain the need for automated credit card approval prediction in banking.
2	Solution Overview	Describe dataset, preprocessing, machine learning models, and Flask architecture.
3	Live Feature Demonstration	Enter applicant details, predict approval status, and explain the prediction output.
4	Q&A Session	Clarify project implementation, algorithms, evaluation metrics, and future improvements.
